

TECHNICAL & COMMERCIAL IMPLEMENTATION PROPOSAL

Order Desk Implementation Proposal

Prepared for **Magic in Home**

A Shopify-connected order desk that gives the Magic in Home team one structured place to enter phone and WhatsApp orders, with employee attribution, clear payment and delivery visibility, and management reporting built in. It works alongside Shopify, Razorpay and Shiprocket, without replacing them.

ONE-TIME IMPLEMENTATION

₹25,000

MONTHLY SAAS SUBSCRIPTION

₹19,999 / month

ESTIMATED DELIVERY WINDOW

3–4 weeks

Taxes and third-party provider charges are additional, where applicable. The delivery window starts once discovery is confirmed and system access has been provided.

01 — EXECUTIVE SUMMARY

One structured desk for every phone and WhatsApp order.

Reygent AI proposes to configure and implement a secure, Shopify-connected Order Desk where the Magic in Home team enters and tracks phone and WhatsApp orders, and where managers see payment, delivery and team performance in one place.

Current operating context

Magic in Home processes approximately **1,000 orders a month**. Shopify holds orders and products, Razorpay handles payments, and Shiprocket manages shipping and delivery. Orders received over phone and WhatsApp are captured by team members and entered into Shopify.

Why a centralized order workflow helps

When orders begin as conversations, a single guided entry point means every team member captures the same details in the same way. Each order carries the name of the person who entered it and the channel it came from, and managers can follow payment and delivery progress without switching between systems. At around 1,000 orders a month, that consistency adds up.

TODAY'S SYSTEMS

~1,000
orders per month

Shopify
orders and products

Razorpay
payments

Shiprocket
shipping and delivery

Proposal status. This is a proposal for a system to be configured and implemented. Nothing here has been deployed yet.

How the Order Desk fits alongside existing systems

Intended benefits

01	02	03	04	05
Consistent order entry	Clear accountability	Clearer payment status	Delivery visibility	Management reporting
Guided screens with product and variant lookup, so orders are captured in a standard format.	Each order is attributed to the employee who entered it and to its source: phone or WhatsApp.	Razorpay, verified transfer and COD orders each follow a defined, visible payment path.	Supported Shiprocket events update shipment and delivery status in the Order Desk.	Team-wide dashboards with Excel and CSV exports by date, employee and status.

02 — V1 FEATURES AND FUNCTIONALITY

What version one will do.

Version one focuses on accurate order entry, clear ownership and controlled changes. Each feature is confirmed against your workflow during discovery.

FOR THE ORDER TEAM

Order entry and employee accounts

- ✓ Secure employee accounts
- ✓ Employee and manager/admin roles
- ✓ Shopify product and variant lookup
- ✓ Customer, quantity, address and payment details
- ✓ Phone and WhatsApp order-source attribution
- ✓ Shopify order creation after validation
- ✓ Employee access to permitted records

FOR MANAGERS AND ADMINS

Manager dashboard

- ✓ Team-wide order counts and order values
- ✓ Filters by date, employee and status
- ✓ Payment, fulfilment and exception visibility
- ✓ Manager approval for high-risk changes and cancellations

Permissions and approvals

Roles keep routine work fast and sensitive changes controlled. Every permitted edit is written to an audit log showing who changed what, and when.

ACTION	EMPLOYEE	MANAGER / ADMIN
Create, review and submit orders	✓ Permitted	✓ Permitted
View order records	✓ Own and permitted records	✓ All team records
Correct customer contact or address details (before fulfilment)	✓ Permitted, with audit log	✓ Permitted, with audit log
Change product, quantity or price	● Request, needs manager approval	✓ Approve or reject
Cancel an order	● Request, needs manager approval	✓ Approve or reject
Override verified payment or carrier status	✗ Not permitted	Set only by verified provider or payment data; exceptions are reviewed, not overwritten
Export reports	✓ Authorized records only	✓ Team-wide records

✓ Permitted ● Manager approval workflow ✗ Not permitted

03 — INTEGRATIONS AND OPERATIONAL WORKFLOW

From conversation to delivery.

Every order follows the same five steps. The Order Desk coordinates the work, while Shopify, Razorpay and Shiprocket remain the sources of truth for what they own.

Five statuses, always kept distinct

An order can be created but unpaid, or paid but not yet shipped. Keeping each status separate keeps dashboards and reports unambiguous.

STATUS	WHAT IT TRACKS	SOURCE OF TRUTH
Order status	Whether the order is in review, created in Shopify, awaiting approval or cancelled	Order Desk and Shopify
Payment status	Whether payment is pending, paid or cash on delivery	Verified Razorpay data, verified transfers, COD workflow
Shipment status	Movement from pickup through delivery, plus delivery exceptions	Supported Shiprocket events
Return status	Returns and return-to-origin (RTO) progress	Supported Shiprocket events and Shopify records
Refund status	Whether a refund has been initiated or completed	Payment provider and Shopify records, where available

04 — TECHNOLOGY AND INTEGRATION SAFEGUARDS

Built on the platforms you already use.

A secure web application that connects to Shopify, Razorpay and Shiprocket through their official server-side interfaces. Employees need only a modern browser.

The technology, in plain terms

Secure web application

Sign-in, order entry and dashboards in the browser.

Operational database

Employee access, order records, audit history and reconciliation references.

Razorpay APIs and webhooks

Payment links and verified payment events, where supported.

Safeguards

Role-based access, duplicate protection and clear error handling, with failed actions surfaced for review.

Server-side integration APIs

All provider credentials and calls stay on the server, never in the browser.

Shopify Admin API

Product and variant lookup and validated order creation.

Shiprocket APIs and webhooks

Shipment and delivery updates, where supported for your account.

INTEGRATION QUALIFICATIONS

Only capabilities verified during technical discovery will be implemented.

- Razorpay payment links do not automatically guarantee that Shopify's financial status will update. We will confirm the supported way to record a verified payment against the correct Shopify order.
- We will validate API permissions, webhook availability and transaction verification for each provider before build.
- We will confirm which Shiprocket events are available on your account before committing to specific shipping, NDR, RTO or reverse-shipment automation.
- Fully automatic bank reconciliation is not part of this proposal. Bank transfers follow a verified, reviewable workflow.

Any capability that cannot be verified will be documented with a practical alternative before build continues.

05 — DASHBOARDS, REPORTING AND DOWNLOADS

A clear view for every role.

Two views of the same reliable data: a focused workspace for each employee and a complete overview for managers.

INDIVIDUAL

Employee view

- Orders the employee has entered or is permitted to see
- Payment and shipment status for each of those orders
- Pending approvals they have requested
- Exports limited to records they are authorized to access

TEAM-WIDE

Manager view

- Team-wide order overview
- Employee-wise order counts and order values
- Payment, fulfilment and exception queues
- Approvals for product, quantity, price changes and cancellations
- Team-wide exports for any date range

Report catalogue

REPORT	WHAT IT INCLUDES	WHO CAN EXPORT
Detailed orders	Order-level detail: products, customer, source, employee, values and current statuses	Employees (authorized records); managers (team)
Employee performance	Order counts and order values by employee and period	Managers / admins
Payments	Paid, pending, COD and refund reporting, where supported by source data	Managers / admins
Shipping and delivery	Shipment progress, delivered orders and delivery exceptions	Employees (authorized records); managers (team)
Cancellations, returns and RTO	Cancelled orders, returns and return-to-origin activity	Managers / admins
Exceptions	Orders needing attention, such as failed creation, payment mismatches or delivery issues	Managers / admins

FILTERS

Date range Employee Order status Payment status Shipment status

DOWNLOAD FORMATS

Excel (.xlsx) CSV

Report contents depend on the data each provider makes available to your account.

06 — ITEMIZED QUOTATION

A clear, fixed investment.

ONE-TIME IMPLEMENTATION

₹25,000

Design, configuration, integration, testing and deployment of the agreed V1 system.

MONTHLY SAAS SUBSCRIPTION

₹19,999 / month

Software access, hosting, operation, support and bug resolution.

TAXES AND THIRD-PARTY CHARGES

Additional

Applied where applicable, in addition to the fees above.

How the ₹25,000 implementation fee is allocated

A single fixed fee, allocated below across the work needed to deliver the agreed V1 system. These amounts are an allocation of Reygent AI's fee, not independently measured vendor costs or third-party expenses.

WORKSTREAM AND WHY IT IS REQUIRED		ALLOCATION
01	Discovery and workflow design Maps how phone and WhatsApp orders are taken today, confirms roles, approval rules and status definitions, and validates API access before any build begins.	₹3,000
02	Order Desk interface, employee accounts, and permissions Builds the secure order-entry screens, employee and manager/admin accounts, role-based permissions, audit logging and the manager approval workflow.	₹6,000
03	Shopify integration and order attribution Connects product and variant lookup, creates validated orders in Shopify and records which employee and channel (phone or WhatsApp) each order came from.	₹4,000
04	Payment workflow configuration and reconciliation design Configures the Razorpay, verified-transfer and COD paths and designs how verified payments are referenced against the correct Shopify order.	₹4,000
05	Shippo integration and status mapping Connects the Shippo events confirmed for your account and maps them to clear shipment, delivery and exception statuses.	₹2,500
06	Manager dashboard, reporting, and Excel/CSV exports Delivers the team-wide overview, filters, employee-wise summaries and permission-aware .xlsx and .csv downloads.	₹2,000
07	Reliability safeguards, testing, deployment, and handover Adds duplicate protection and error handling, runs end-to-end testing, deploys to production and walks your team through the system.	₹3,500
Total one-time implementation fee		₹25,000

The fee covers the design, configuration, integration work, permissions, testing and deployment required to deliver the agreed V1 system. Taxes are additional, where applicable.

07 — MONTHLY SUBSCRIPTION AND SCOPE BOUNDARIES

What ₹19,999 a month covers.

The subscription keeps the agreed Order Desk running, supported and working as specified after go-live.

Software access

Use of the agreed Order Desk software by your team.

Hosting and operation

Hosting and routine operation of the agreed system.

Support and troubleshooting

Technical support and troubleshooting when your team needs help.

Bug and error resolution

Fixes for bugs and errors within the agreed functionality.

Outside the subscription

- **New features, custom development and changes beyond the agreed scope** are quoted separately before any work begins.
- **Third-party charges**, such as Shopify plan fees, Razorpay transaction fees and Shiprocket shipping charges, are billed by those providers.
- **Provider outages and limitations** remain subject to each provider's own terms and capabilities. We will help diagnose impact on the Order Desk.

V1 scope boundaries

INCLUDED IN V1

- ✓ Shopify-connected order entry, attribution and permissions
- ✓ Razorpay, verified-transfer and COD payment workflows
- ✓ Supported Shiprocket status updates
- ✓ Manager dashboard, reports and Excel/CSV exports

NOT INCLUDED IN V1

- ✗ Replacing Shopify, Razorpay or Shiprocket
- ✗ Fully automatic bank reconciliation
- ✗ Integrations or automations not verified in discovery
- ✗ Native mobile apps (V1 is a responsive web application)

Changes after sign-off. If priorities shift during or after implementation, Reygent AI will describe the change, its effect on delivery and its cost in writing. Work proceeds only once you approve.

08 — DELIVERY PLAN AND NEXT STEPS

Live in an estimated 3–4 weeks.

The delivery window begins once discovery is confirmed and the required system access has been provided.

Indicative schedule. Final dates are confirmed at the end of discovery and depend on access, provider verification and timely feedback.

What we will need from Magic in Home

- Shopify admin access to approve the custom app and API permissions
- Razorpay and Shiprocket API credentials and account access
- Employee list, roles and approval rules
- A nominated contact for workflow decisions and acceptance testing

Next steps

- 1 Review this proposal and confirm the V1 scope
- 2 Sign the acceptance below and the service agreement
- 3 Provide system access and schedule the discovery session
- 4 Reygent AI confirms the delivery plan and begins build

Summary · Implementation ₹25,000 one-time · Subscription ₹19,999/month · Taxes and third-party charges extra

Billing schedule and payment terms will be set out in the service agreement. This proposal is valid for 30 days from 10 October 2026.
